

| Summary

Master's student in Informatics specializing in Linux systems programming, distributed systems and computer architecture. Developed communication and leadership skills through long-term research and technical projects. Confident in my abilities, but always eager to learn new skills.

| Education

- 2025–Present ○ **Master of Engineering in Informatics**, *Gdańsk University of Technology*
Specialization: Machine learning
- 2021–2025 ○ **Bachelor of Engineering in Informatics**, *Gdańsk University of Technology*
Specialization: Information and communications technology

| Master thesis

- Title *Performance analysis of the Finite Element Method implementation in a Web Browser Environment*
- Supervisor Marek Moszyński, PhD, DSc Eng.
- Description Implementation and performance comparison of FEM algorithms targeting native and WebAssembly environments with WebGPU acceleration.

| Bachelor thesis

- Title *Application for anonymous exchange of information using the P2P communication model*
- Supervisor Krzysztof Nowicki, PhD Eng.
- Description Design and initial Rust-based implementation of a novel anonymizing P2P protocol. I proposed the subject of this thesis and led a team of 4.

| Extracurricular activities

- 2024–Present ○ **President**, *Vertex Computer Graphics Science Club*
Created the Rust WebGPU and C++ Dynamic Analysis courses.
- 2023–2024 ○ **Vice-President**, *Vertex Computer Graphics Science Club*
Assisted a team of 9 people during the Cyberiada 2024-2025 national game design competition.

| Notable Projects

- 2024–Present ○ **Main Developer**, *Extensible Object Network research project*
A zero-trust distributed database and protocol runtime. A direct continuation of my bachelor thesis.
○ Implemented an inversion of control procedural macro layer on top of the Rust libp2p library.
○ Created a custom Kubernetes cluster and a Kustomization-powered testing environment.
- 2025–Present ○ **Team Lead, Lead Software Architect**, *Knot Smart*
A video game for the Cyberiada 2025-2026 national game design competition.
○ Effectively managed a team of 10 people using Kanban.
○ Set code review standards and software architecture guidelines.
○ Used profiling and debugging tools to optimize hot code paths.

| Languages

- Polish Native speaker
- English C1 Advanced

(ACERT, Grade 5.0)

| Programming languages and tools

Proficient in: safe Rust, async Rust, C++17, C, Bash, Python

Known tools: git, binutils, gdb, gprof, lldb, Nix, Kubernetes, CRI-O, Docker, Podman, Shadow
