

| Summary

Master's student in Informatics specializing in Linux systems programming, distributed computing and computer architecture. Developed communication and leadership skills through research projects and leading technical teams. Confident in my abilities, but always eager to learn new skills.

| Education

- 2025–Present ○ **Master of Engineering in Informatics**, *Gdańsk University of Technology*
Specialization: Machine learning
- 2021–2025 ○ **Bachelor of Engineering in Informatics**, *Gdańsk University of Technology*
Specialization: Information and communications technology

| Master thesis

- Title *Performance analysis of the Finite Element Method implementation in a Web Browser Environment*
- Supervisor Marek Moszyński, PhD, DSc Eng.
- Description Performance comparison of FEM implementations targeting native and WebAssembly environments with WebGPU acceleration.

| Bachelor thesis

- Title *Application for anonymous exchange of information using the P2P communication model*
- Supervisor Krzysztof Nowicki, PhD Eng.
- Description Design and initial Rust-based implementation of a novel anonymizing P2P protocol. I proposed the subject of this thesis and led a team of 4.

| Extracurricular activities

- 2024–Present ○ **President**, *Vertex Computer Graphics Science Club*
Created the Rust WebGPU and C++ Dynamic Analysis courses.
- 2023–2024 ○ **Vice-President**, *Vertex Computer Graphics Science Club*
Assisted a team of 9 people during the Cyberiada 2024-2025 national game design competition.

| Notable Projects

- 2024–Present ○ **Main Developer**, *Extensible Object Network research project*
A zero-trust distributed database and protocol runtime. A direct continuation of my bachelor thesis.
- Developed an inversion-of-control procedural macro framework on top of Rust libp2p.
 - Created a custom Kubernetes cluster and a Kustomization-powered testing environment.
- 2025–Present ○ **Team Lead, Lead Software Architect**, *Knot Smart*
A video game for the Cyberiada 2025-2026 national game design competition.
- Used Scrum practices alongside Kanban-based task management to effectively manage a team of 10 people.
 - Established standardized code review practices and architecture guidelines.
 - Used profiling and debugging tools to optimize hot code paths.

| Languages

- Polish Native speaker
- English C1 Advanced

(ACERT, Grade 5.0)

| Programming languages and tools

Proficient in: safe Rust and async Rust, C++17, C, Bash, Python

Known tools: git, binutils, gdb, gprof, lldb, Nix, Kubernetes, CRI-O, Docker, Podman, Shadow
